

Amendments To The Specification

Please replace the paragraph [0033] with the following amended paragraph:

[0033] FIG. 3 explains the sectional view along line B-B in FIG. 1. Herein, the reinforcing pipe 11 made of metal, preferably steel such as[['']]\_stainless steel, is shown, said reinforcing pipe being surrounded by the plastics pipe 12 for limiting the lumen 9 in this region.

Please replace the paragraph [0036] with the following amended paragraph:

[0036] As an alternative to the embodiments of FIGS. 1 to 4, it is conceivable that the portion 10 as a whole is formed as a metal pipe, i.e. not consisting of two concentric pipes, as shown in FIGS. 3 and 4. In this case, the metal pipe 11 has a massive cross section in which a longitudinal borehole is made for forming the lumen 8 and an adjacent borehole is made for forming the lumen 9. In another embodiment which is basically conceivable, the plastics plastic pipe (which would correspond to the portion 17 being designated with a dotted arrow in FIG. 1) ensuing the metal pipe is also formed as a pipe with a massive cross section, in which corresponding boreholes are provided for the continuation of lumen 8 or 9.
